

World Down Syndrome Day

A person with Down syndrome has an extra copy of chromosome 21, so every year World Down Syndrome Day (WDSO) is celebrated on the 21st day of the third month to represent the three copies of chromosome 21. WDSO is an opportunity to raise awareness about Down syndrome and celebrate people with the condition; as well as advocating for the rights, inclusion and well-being of people with Down syndrome.

The children of Smarties can help us celebrate this day by wearing odd socks to school on March the 21st.

Thank you
